heating and cooling heat pump Multi-function-cooling in summer-heating in winter

Feature:

Scientific research shows that from the perspective of health and comfort, the ideal temperature in winter is between 18-20. The ideal heat distribution shows a temperature distribution from floor to ceiling and vertical reduction, which can keep the feet warm and clear-headed. The heat of the floor heating rises from the foot, so that the temperature of the whole indoor space is hierarchically distributed. It conforms to the theory that TCM health is "warm and cool". The floor heating is an ideal heating method without hot air, which is beneficial to the body to maintain moisture. At the same time, it has a promoting effect on rheumatism and asthma.
