Product Description

DKFXKR-50II-M1CD1 Inverter EVI heat pump heating and cooling

Product Description:

Meidibao DC inverter air source heat pump utilize DC inverter technology and REPM compressor which running speeds can be adjusted follow the variation of ambient or water temperature, hence to regulate the output capacity with changeably, this can heat the storage tank or room much quicker than normal on/off heat pumps, and balance the water or air temp very precisely. This also provides a very high COP as inverter system does not waste the energy. By inverter technology of frequency changeable the inverter heat pump can increase the compressor speeds to be more than 5000rpm at very low ambient at -25C. This can increase refrigerant mass flow rate to offset the source energy loss and keep an acceptable performance.
